

## LIBRARY IMPORT

Done!

- IMPORT Make sure library type is being imported.
  - SETUP Make sure script is run when database is closed to update any changes to the creator node's record. ANSWER Gave this update task to the spell check script.
  - TEST Right align test record information so when user zooms window on an iDevice, this information is visible.
  - TEST Add form automatically when user creates a new test record.
  - TEST Fix hiding of form FT items when user returns from the test section. ANSWER Put in script step to perform the menuTestItem script.
  - TEST Create ability to set focus on main or checklist (Tag Menus) window by subsection, so focus is window where user needs to input data. ANSWER Nope, this won't work because user has to see the main result record first to know what result the current checklist is for.
  - SETUP Figure out new message to tell user where to find new copies of the database.
  - TEST Fix formula that inserts the time on the test module. Currently if the hour is only one digit, it puts in the : for the seconds.
  - TEST Add scripts to template tag layout so if user clicks in a button area but sees a text field instead of a button, they are entered into the text field instead of having the type of button changed.
  - TEST Give user ability to paste previous record's filled-out form or a new-blank form when creating new test record. This way, a user who is doing exercise, can have their current weights and reps data copied and pasted into the new record, having then to only update exercise changes instead of filling out a whole new exercise form.
  - NODE Inform user to re-add any other node's after name change of Other Node creator nodes.
- 
- Copy changes from fm12 to fp7 library, as fm12's pdf ability is broken (NOTE: After doing this importing I found it too difficult to continue working back-and-forth between the 2 versions. So, have stopped updating the fp7 version of Filemaker):
  - Make sure all fm12 scripts are in fp7
  - FM7 change Table testSectionOnATest to testSectionCreatedFromATemplate
  - FM7 update addInitialDateTimeToTextField

- FM7 update change temp field textDateIntialTime from 3 to 4 repetitions
- FM7 update checkKeyANDNodeTagNames
- FM7 update checkORaddTestItem
- FM7 update CHUNKcheckCreatorNodeAndPrimaryNode
- FM7 update CHUNKCopyrightLockedFields
- FM7 update createFormOutOf\_FT\_TestItems
- FM7 update deleteTestItem
- FM7 update editReport
- FM7 update findLearnRecord
- FM7 update gotoTestSubsections
- FM7 update gotoTimeLogMainWindow
- FM7 update importDataFromABranchIntoThisMainLibrary
- FM7 update libraryTypeCheckBoxRepition1
- FM7 update libraryTypeCheckBoxRepition2
- FM7 update loadRefCiteTag
- FM7 update loadTagRecord
- FM7 update loadTestResultRecord
- FM7 update menuReference
- FM7 update menuReferenceFind
- FM7 update menuTestItem
- FM7 update newLibraryStep2eraseRecordsInLibraryCopy
- FM7 update newLibraryStep3A\_makeEmptiedLibraryANewLibrary
- FM7 update newLibraryStep3B\_importLibraryIntoEmptiedLibrary
- FM7 update newTagMenuTagGroup
- FM7 update newTagMenuTag
- FM7 update newTestResult
- FM7 update pictureViewButton
- FM7 update removeTextFormattingAndCommas
- FM7 update returnToSetup
- FM7 update SeelfFileNamelsValidAndCanBe Displayed (new)

- FM7 update setupReference\_GoToPortalReferenceRevieworWebsite (new)
  - FM7 update setupReference\_New (new)
  - FM7 update shareLearnRecords
  - FM7 update showCitationPicture1inNewWindow
  - FM7 update showReferencedFileFolderOrWebsite
  - FM7 update showTagLink1
  - FM7 update showTagLink2
  - FM7 update showTagLink3
  - FM7 update showTestSubjectCopyrightPicture (update and name change showTestSubjectsPicture)
  - FM7 update startDatabase
  - FM7 update stopNewRecordsBeingCreatedByLockedNode (new)
  - FM7 update testItemCheckOrTextOrForm
  - FM7 update testItemCheckTemplateButton (new)
  - FM7 update testItemTextOrFormTemplateButton (new)
- 

- IMPORT Add ability to detect with importData script if library is importing idea or things into the opposite type of library.
- IMPORT Fix failure check so just starting up the library does not result in an import failure message.
- START Fix check drag spelling script so it does not replace test item group with wrong field.
- IMPORT Check newLibraryStep3A\_makeEmptiedLibraryANewLibrary script to make sure step 2 is putting in the group ID number.
- IMPORT Change import message to tell user not uncommon for library to crash several times in a row.
- SWITCH See if library opened on iDevice is being added to list of libraries on device.
- TAG Key and Node figure out what to do with notes field. Right now the copyright key is being put there for nodes. ANSWER: For now, switched notes field on key and node layouts to the unused modifier node field, and changed its name to key and tag notes field. It would be better to have only one notes field, but too much time testing is required to make that happen right now.
- TAG Fix FM13 bug where it selects locked tag field. Change these fields to taglock fields instead.

- IMPORT Fix new library script so it deletes “new library” tag after completion.
- Add two commands to bottom of newLibraryStep3A\_makeEmptiedLibraryANewLibrary and the import script 3B as well to insure the backup field is empty, or else user will get asked an import or new library question when opening the database after an import or new library creation:

```
#Erase codes that trigger new
#library creation script steps.
Go to Layout ["backup" (backup)]
Delete All Records [No dialog]
New Record/Request
Set Field [backup::backup; ""]
Set Field [backup::newLibrary; ""]
```

- IMPORT Test all new and import scripts.
- IMPORT Fix import cancel after user has saved copy and is now picking out database to import. Currently the Setup window closes, and then when you try to restart the library the Tag Menus window closes, closing the library.
- IMPORT check if import script is used by anything other than its button.
- SETUP Fix import script by adding setup references.
- SETUP Add checking of the library type to the new library script.
- IMPORT Fix import script so it checks if a library is an idea or things library, and stops user from importing records from one into the other as they are not compatible.
- IMPORT Create logic to capture most recent setup reference library name and version to apply to imports if library getting records has “New Library” as its name. And if not, then ask during import if the user wants the import library’s name, or if they wish to keep their custom name and version number. **DECIDED NOT TO DO THIS**, because then you would end up with two library records in the tag groups field.
- IMPORT Make sure to delete import library’s library group tag, so only the main library’s tag remains.
