

LIBRARY DELETE

Done!

- DELETE Update delete copyright script to make it align with changes to copyright logic which now follows the node creating records and not the records created by nodes.
- DELETE Add locked node check script to delete scripts, so one logic is being used to determine if user is dealing with a locked node whether trying to use it to create or delete or modify records. ANSWER: Bad idea because each record type requires a different check of the records use by other records which would prevent its deletion.
- DELETE Update the delete scripts for the Add picture to tag script.
- DELETE Spell out locked node logic in the script testing for locked nodes.
- DELETE Test all delete scripts.
- DELETE Fix node delete script so it stops checking for Report records as they cannot be deleted by the user, and add check of test sections and results created by the primary node, in addition to checking these same records for their test subject node.
