

LIBRARY SETUP

Done!

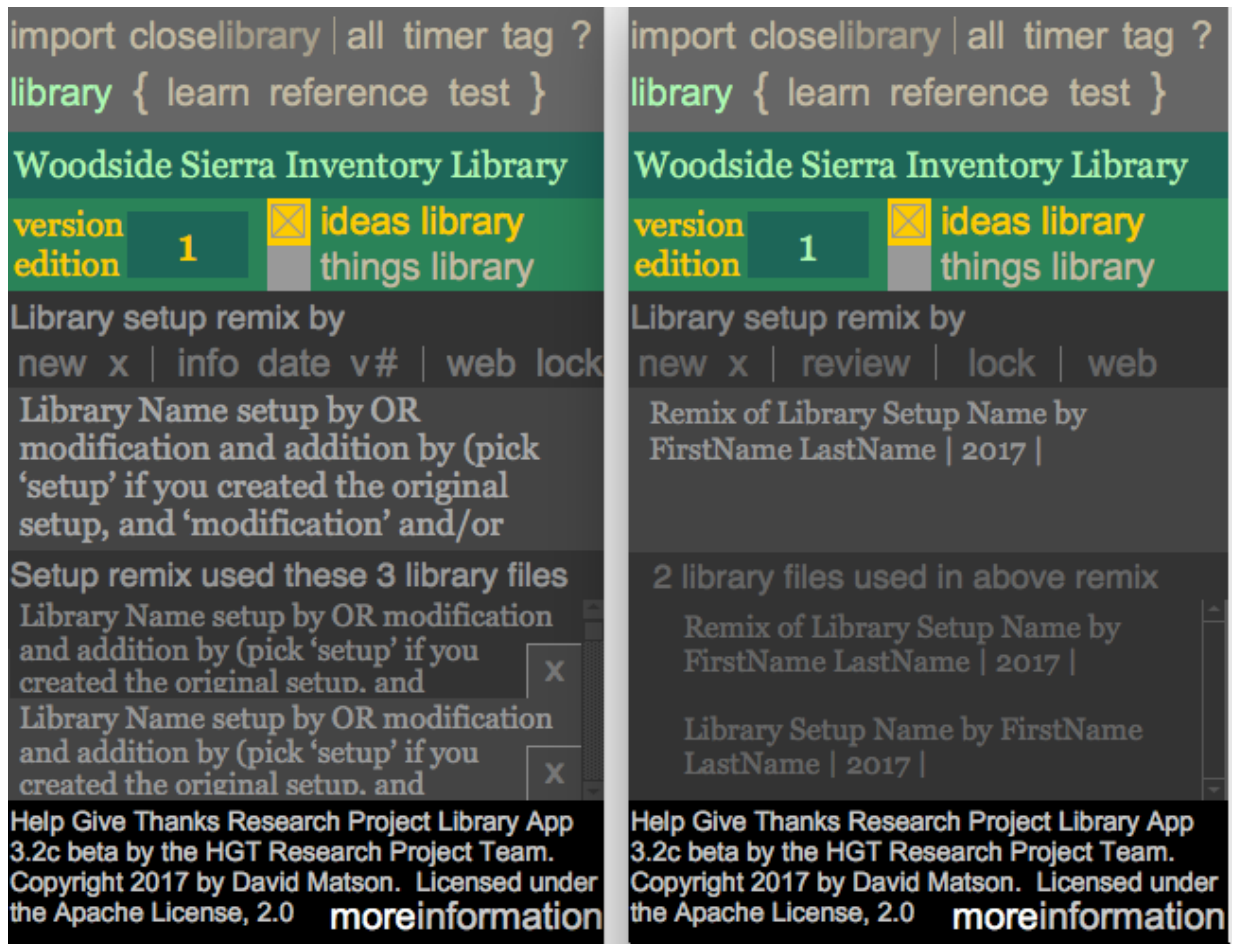

- SETUP Fix libraryTypeCheckBoxRepetition1 and 2 scripts so they save choice to have library be an ideas or things library.
- SETUP Fix changeLibraryName so a temp table field shows on the Setup layout, which can be updated even if there no records for that layout.
- SETUP Fix getting library ID so it only gets it if the temp library ID and name fields are blank.
- SETUP Fix version/edition number and custom library name fields and script.

Punch list for testing and completing new library setup credit table and layouts for giving users a uniform way to give themselves credit for setting up libraries and remixing them:

- SETUP Fix Start script to insure it shows all setup references and sorts them last reference (current) is showing.
- SETUP Create new setup-reference-record script and button, and insure that it takes the user to the setup reference edit layout.
- SETUP Create delete setup-reference-record script and button.
- SETUP Create review script and button to allow user to get to the edit a reference and to review a reference if it is too big to fit into the space on the main Setup layout, which means also create new edit and review layouts.

- SETUP Create curator table and interface on Setup layout, so users can painlessly give and take credit for library setups they share and remix to benefit us all.
- SETUP Fix layout of curator reference interface so it is less eye catching, busy, etc.

- SETUP Create lock script and button for setup references that locks them separate from creator node lock.
- SETUP Add feature to setup node lock script that reminds user if they have a setup reference record that it must be locked separately.
- SETUP Add feature to setup node delete script that tells user if the node was used to create setup reference records, and to prevent its deletion if it was used to do so.
- SETUP Create web script and button to tell user how to enter a URL or if there is a URL, to open this website.

-
- SETUP Fix highlights on all node layouts.
 - SETUP Add a 'created by' node field to edit copyright layout.

This is a copy of the human-readable summary of (and not a substitute for) the Legal Code from CreativeCommons.org provided for your convience.

- SETUP Look into changing `$$citationMatch = "section"` into "library" on default layouts.
- SETUP Add version number to AllSolutions layout, so user can quickly see which version each library is using.
- SETUP Add one-time-per-session message to Setup and Learn node menu scripts that tells user only creator nodes are shown on these layouts.
- SETUP Fix it so Reference nodes cannot be used to create or edit records and are not shown in Setup and Learn sections. Creator node's can be used as required on Reference records if they are a Referenced works author.
- SETUP Fix `newTagMenuTagGroup` and `newTagMenuTag` scripts so when creating node records in Setup and Learn sections, they are created as creator nodes. Creator nodes can edit and create and lock their created records. Regular node records must be created by creator nodes.
- SETUP Fix `defaultNodeMenu` and `menuNode` scripts so in Setup and Learn sections only creator nodes are found, while in the Reference section all nodes are found. This insures that none creator or just-reference nodes, cannot be assigned primary or other node status in the Setup or Learn sections.
