

## LIBRARY CHECKLIST

- CHECKLIST Add conversion layout checklist layout that gets activated after conversion and must be turned off by admin.
- LEARN Test brainstorm new script and group script for goto field command (currently new record is created but cursor is not appear in the field requiring a new name).
- REFERENCE Italicize locked references so to give user a visual clue as to locked status.
- REFERENCE Stop Italicizing locked path tags, AND make sure they cannot be locked as they are for a users personal computer, and so there is no way to publish them for other users.
- REFERENCE Create a reference edit layout for locked references, so user can edit their file location on their computer, and also edit the key words.
- REFERENCE Allow path and keyword tags to be applied to locked reference records. These are for the user's own personal use, and should not be locked.
- LEARN Allow brainstorm, test, and keyword tags to be applied to locked learn records. These are for the user's own personal use, and should not be locked.
- SETUP Fix move tag script so sort defaults to current menu's sort.
- SETUP Fix conditional formatting of test subject so it goes by the set default and not the current test subject selection in the setup test main window.
- TEST Enhance navigation scripts so when user is leaving a layout in test setup template section, the check spelling script is run to change back any tags the user did not click into and change.
- REFERENCE Check spelling script is run to change back any tags the user did not click into and change when leaving reference section.
- LEARN Check spelling script is run to change back any tags the user did not click into and change when leaving learn section.
- SETUP Fix the node menu layouts so they include the order number field for groups.
- REFERENCE Change \$category variable to \$group in deleteCCCP script.
- COPYRIGHT Create a nameLock field for tagGroup table for use on locked layouts to allow full access to text while preventing changes to text.dasdfasdfas
- REFERENCE Fix delete key script so after the delete the current record's variables are loaded, so if the user decides to move it, the move variables will be there.

=====

Test all scripts on node, key, and ref \$\$citationMatch scripts.

- Node setup new
- Node setup group
- Node setup x
- Node setup move
- Node setup add
- Node setup lock
- Node learn new
- Node learn group
- Node learn x
- Node learn move
- Node learn add

- Key learn view
- Key P Add
- Key O Add
- Key P Remove
- Key O Remove
- Key changeSpellingOfKeywordOrNodeTag learn
- Key changeSpellingOfKeywordOrNodeTag reference

- FIX node and key tag scripts where the load tag script is halting scripts that are in the middle of their run.
- TEST Fix right-side T or FT button which fails to make transparent lines used to make button appear beveled when it is not in use. ANSWER: Create 2 solid square's of color with conditional formatting, and place them under the text layer of the button and offset them to mimic the lines.
- LEARN Fix brainstorm duplicate script as it is failing to copy name and add a version number to it as the dialogue box says it will do. ANSWER: Variable for insert the name in the new record was not named correctly.
- CHECKLIST Remove normal user restrictions for Reference file. Turn off Require re-authentication after the specified minutes in sleep/background.
- ☐ Report FM Bug with pulldown in first list field's group.
- ☐ Report FM Bug with web viewer interpretation of 100% applying to web viewer size versus image's size.
- TEST Change form button and script to apply to individual items instead of groups of items.
- TEST Prevent user from turning a check into a text item if the test item is currently in use as a check item.
- TEST Fix new test and group item scripts so they copy the check, T or FT of the current item and apply it to the new item.
- ☐ FIX COPYRIGHT in FM12 (fine in fp7) display with = sign not aligning on setup all defaults.
- See if during conversion learn picture fields are getting dashes?
- LEARN Create iPad view layout for editing learn records on iDevices.
- Ugh!!!! Install FM11 and see if I can work in it. Has quick search, so will save time upgrading by not requiring me to turn it off on every layout! NO! I only bought the basic, not advanced version so unusable for programming. Solution, use Rick's older mac.
- TEST Fix form and V button scripts so they stop hiding form items after viewing the form. Also, probably shouldn't hide FT items in template section.
- TEST Fix formatting of FT buttons. Need to paint it with check button, and then transparency it. Finally, follow and apply measurements from working FM12 test.
- Test Results fix order and special character pulldowns in Test and Report sections.
- CHECKLIST Delete References window extra fields put there to help me edit old reference records.
- Format paint FT test item buttons with T button format, and then make FT button

— transparent on setup, test, and report layouts.

● UPDATE script Interactivate Source: <http://www.teamddf.com/weetbicks/252/change-containers-from-files-to-interactive-content-in-an-instant>

- ☐ CHECKLIST Make sure tables are in alpha order.
- ☐ CHECKLIST Create a checklist of good test data to add, like reference file names that are different based on filetype, so instead of a.jpg, a.gif >>> jpg.jpg, gif.gif, etc.
- ☐ CHECKLIST Remove tooltips and tabs AND QUICK SEARCH from all layouts.

Script Name: `pictureInsert (update)`

**"Insert File" Options**

Custom Dialog Title:  Specify...

**Filters**

Name	Extensions
"Universally...ble Movies"	(m4v; mp4)
"All File Types"	(*)

New... Edit... Delete

Select Reference to store a path to files on a local disk. Select Insert to embed a file in the database or to use directories set up in the Manage Containers dialog.

Storage options:  ⌵

For images and interactive content, you can display either a file icon or the file content. Some files can only be displayed as icons.

Display: ☐ Icon with filename  
☒ Content of file (when possible)

Compression can only be used when displaying files as icons. Some file formats (JPEG, MP3, etc.) are already compressed and cannot be compressed further.

Compression: ☒ Never compress  
☐ Let user choose  
☐ Compress (when possible)

Cancel OK

Run script with full access privileges

- ☐ CHECKLIST Make a backup that includes thumbnails and investigate if making them permanent helps.
- ☒ CHECKLIST updating `CHUNK_insertPictureOrMovie` script!

Script Name: pictureInsert (update)

"Insert File" Options

Custom Dialog Title "Insert Playable Movie" Specify...

Filters

Name	Extensions
"Universally...ble Movies"	(m4v; mp4)
"All File Types"	(*)

New... Edit... Delete

Select Reference to store a path to files on a local disk. Select Insert to embed a file in the database or to use directories set up in the Manage Containers dialog.

Storage options: Insert

For images and interactive content, you can display either a file icon or the file content. Some files can only be displayed as icons.

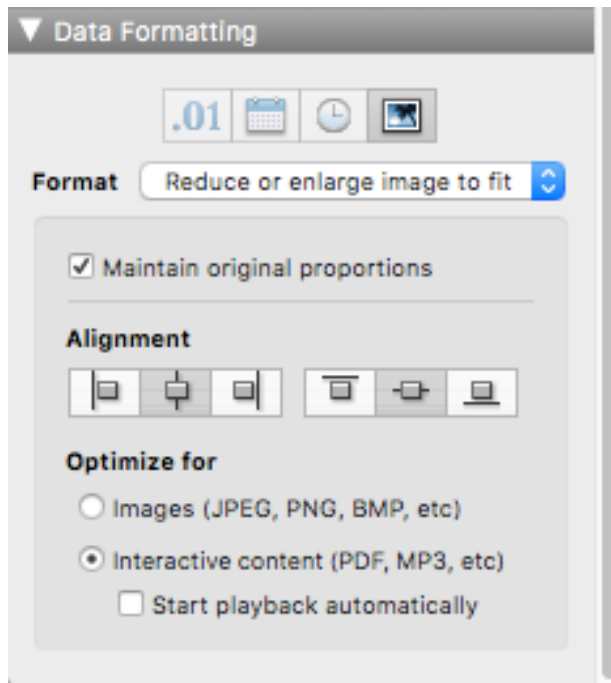

Display: ☐ Icon with filename ☒ Content of file (when possible)

Compression: ☒ Never compress ☐ Let user choose ☐ Compress (when possible)

Cancel OK

.. CHECKLIST Making it interactive or movies can't be played on all 4 layouts.

- CHECKLIST Create script to reload images on tables and table aliases as this seems to be the only way to force Filemaker to recreate thumbnails, so first reload the picture files, then refresh the web viewers.
