

LIBRARY REPORT

Done!

- REPORT Fix OK, NA, so they don't show in report pulldown. ANSWER: Made primary pulldown of value list the report table instead of the testSubsection table.

- REPORT Improve message for showPicture scripts 1-4 about how to add media.
- REPORT Fix Info records so their number only shows up if used on a report.
- REPORT Fix addORremovePrimaryTag script message regarding removing subsection (test) tags from Learn (info) records so it stops mentioning the subsection's group name. Group names only appear in template setup to help

organize subsections. These group names do not appear in the Test or Report section.

- REPORT Fix info reference window from being closed when users pasts, deletes, or copies a info record in the Report window. Right now doing this closes the Reference window and resizes the Tag Menus window.
- REPORT Remove section information from the Report layout as the report is about subsections that can have test results in many different test sections.
- REPORT Highlight the active test result so user can tell which one is selected.
- REPORT Fix the new and use scripts so the test subsection name is captured. Currently, the section name is being inserted into both the section and subsection slots when the user creates new test result records.
