

## LIBRARY ISSUES

(This checklist was used until it became overwhelming. I then cut out all remaining issues from here, and pasted them into new, more specifically focused library checklists.)

- Stop importing library section record when adding records to a library, and replace new libraries section record if updating a library to a new version, so there is only one section record per library.
- Fix findPrimaryTL (update) script which seems to be finding Learn records, but is not unfinding them when the button is clicked a second time. Also fix conditional formatting on learnFind layouts.
- Fix spelling of other node script.
- Fix 'holder' check box spacing, and change all 'storage' check boxes to 'holder' checkboxes.

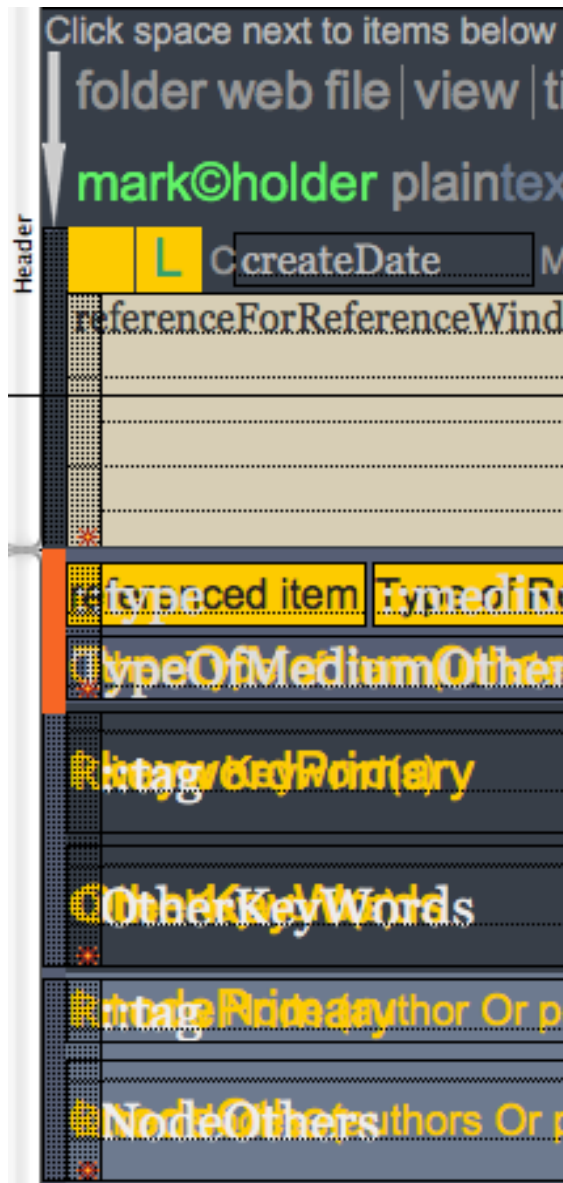

- Fix learn record tag button so it turns purple when learn records are tagged with it.
- Fix test module results sort so it is by date and time from first to last.
- Create new setOrderForSampleOrTest for report info layout.
- Update changeTLRecordsSort\_Button for report info layout.
- Fix start script so if admin is not logged in the page setup is for a standard letter size piece of paper.
- Change primary keyword to subject. DECIDED TO leave it as keyword and reference the fact that in paper card catalogues it was called subject.
- Fix this

- Expand width of the help button strip on ReferenceEdit layout to make it easier to

activate with a finger on an iDevice.

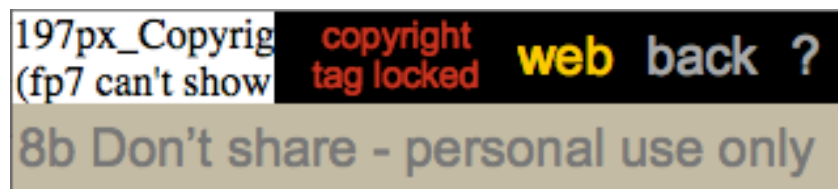

- Fix go to library button on all solutions screen so that it updates the current go to library field as well. Currently when you click it it doesn't on iDevices, and so every time you click the library button in the timer it uploads the previous library it had in memory not the one you just went to.
- Add a sort bar similar to the one in specific action log to let people know if they are sorting by keyword/subject, author, title, date, etc. also add a sort for author.

Woodside Sierra Inventory Library  
sortby author date pub subject title  
folder web file | all find | timer tag back  
new "d" edit x | infolder cp | ?

- Finalize web viewer text for inclusion of new video/pdf image file separation.
- Fix back to main window script so it focuses on main window instead of Tag Menus window.
- Fix going to every record and loading when going to default node and copyright menus.
- Create a no-pictures view for default nodes.
- Fix picture replace message when in stuffLibrary mode as the only option is to replace the picture in the library.

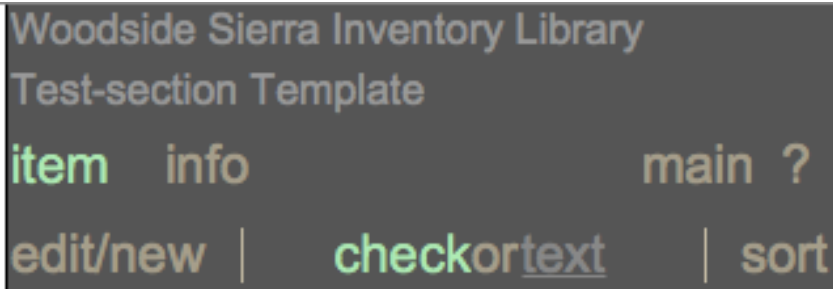

- Fix picture edit window so user cannot leave it if a picture is required.
- Add a web button on copyright text view layout.
- Add a ? button the copyright text view layout.

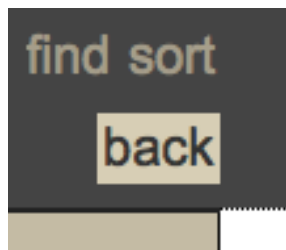

- Make all copyright layouts use the description text as an edit button.

- Remove section search item from all delete in-use scripts.
- Hide node/password order field on all node tag menu layouts.
- Make new 'back' button on setup test-item layout hidden when user is coming to edit them from the testing or reporting modules:

- Move copyright to below keywords.
- Fix back button on learn test tag menus so it is invisible when not coming from test section.

- Fix adding a publication tag and then clicking in the publication field both ungreen the tag and unlinks it from the publication tag menu so that you have to reload it in order to take away or change the publication tag. A: Problem was due to unchanged old keyword organ vs publication.
- Fix copyright designation script.
- Under copyright put an check all the apply copyright holder checkboxes.
- Separate Publisher checkbox from all other publisher tag type checkboxes. "IF not publisher, select another option below." ALSO update help for this field.
- Should copyright default follow node's copyright? Or be independent? FOLLOW PRIMARY node.
- Add view function to cite tag menu to disappear pictures.

```

key copyright publication publisher
node path cite | find sort | main ?
      +key | file web | view
bathroom guest(001).. keyword: p

```

- LEARN Remove 'copyright' from granular tag/learn record. Instead, attach copyright to node. Re-arrange tag menu buttons as follows to take advantage of space given up removing 'copyright' button.

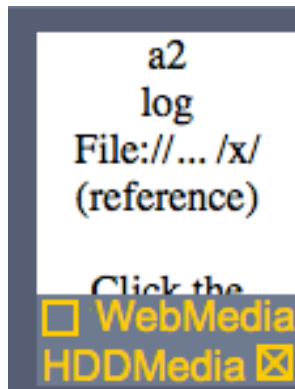

node copyright   brainstorm test	key   brainstorm test   main ?
key   reference   find   main ?	node   reference +key   find   add
newtag group x move sort view add	newtag group edit x   web move

NOTE: the reference menus still have a copyright button, but the 'key' button relocation helps space the buttons better and parallels its move in the Learn module.

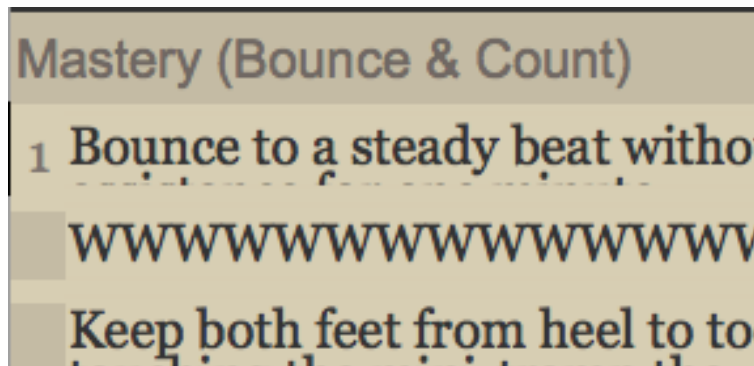

node copyright publication publisher	key copyright publication publisher
key path   cite   find   main ?	node path cite   find sort   main ?
newtag group x move sort view add	newtag group edit x   move web

- Fix add to tag in Learn reference menu so user is asked to add media in HDD pics. Test for web too.
- Create duplicate test feature.
- Clear remember variable.
- Indent text items by 5 points.
- Change smiley face to 5 point rating pulldown menu.
- Include date in title of test.
- Add timestamp and ID button.
- Show order numbers on test item screen.
- Fix test result total.
- Highlight doctoral dissertation.

- Fix sort of test results so new one shows when testing.
- Update conditional formatting of all test and report picture views with `testlearn::filterFind = ""`
- Provide a way to delete order numbers by making delete option every tenth selection in popup menu.
- Fix node menu script scrolling sloooooowly on the default layout.
- Update more info.
- add warning in fp7 to change networkprotocol formula
- Fix reference media check boxes so they only give info message when user is removing a picture that is in use AND fix HDDmedia checkbox checks to insure user has filled in info to see HDD media.

- Format lines in test item so they hide ends of text letting user know there is more they need to click into box to see.

- include in helpful research links >>> PDF Thumbnails in FileMaker 14 | FileMakerHacks.html
- Create protocol for new versions focused on refreshing the web viewers.
- Should all records in a library be tagged with the libraries section as way of identifying which library records came from after mergers take place? NO

```

* #
* #Only test focus tags require section. All other tags
* #are linked to groups and then the groups are linked
* #to sections.
* If [$$citationMatch = "location"]
*   Set Field [tagMenus::ksection; TEMP::ksection]
* End If

```

- Find out why Library at startup keeps locking default node with a password 'a'? AND why unlocking doesn't always unlock? It was because I used the same temp field for both password checking and for storing the primary nodes password. Solution is to have separate temp fields for setting passwords and for storing the primary nodes password.
- Left align of text messages in web viewers. Center align does not seem to work on iPhones.
- Consolidate primary node locked record message into one script that is performed every time the user tries to create new records with this this node as the author.
- Find out why Library at startup keeps checking both idea and thing boxes if it is thing mode? Probably because the file being imported is thing and the original file is idea and the variable is not cleared before importing.
- Fix number pick in Setup module to popup.
- Fix help text for Media checkboxes, URL, FileName, etc.

PubDateOther (ex: 2012 Fall or May-July)	close
Copyright (no, some, all rights reserved)	Web address where you found the referenced item.
CopyrightDate	Locate the most stable web address for the referenced item, so that your reference will be good for many years to come.
Other Copyright Holder	
https://www.youtube.com/embed/o_x2RVnlTZs	If you have a DOI number, then you don't need to include the web address as the DOI will always take you to the permanent location on the web for the referenced item.
DateOfWebVisit	
Show <input type="checkbox"/> library url instead of saved url if the saved url requires a password to view.	
go ISBN (B as in Blob ex: 1594860548)	If you are referencing a video, try to locate it on YouTube if the creator (not a fan re-posting the video) has a YouTube Channel, as this link allows for easy download of files at a variety of sizes and qualities.

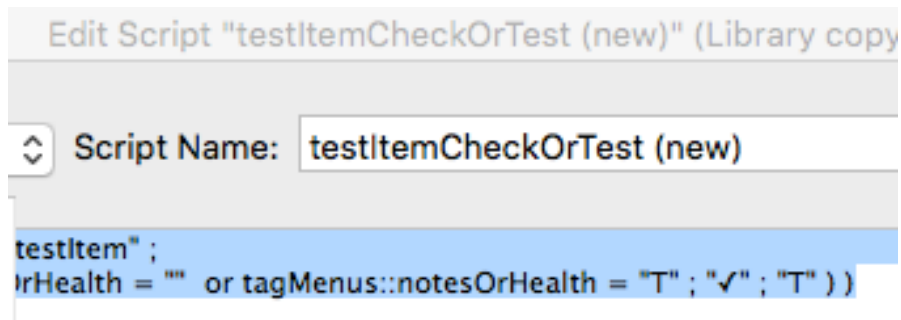

- Fix changeSpellingOfTagCategory so when you change the spelling of a duplicate the Tag Menus window does not close.
- Fix find scripts in Learn and Reference modules. Seems FM considers three question marks ??? an illegal character result in an error of 1 = user canceled script, which the user did not! So must figure out a work around. NEED TO CREATE a exitFindField script that capture this error and brings up dialogue box = to one above.
- Update insert search date options from 2012 to 2016 and include time for the 3 placeholders: 1) > 1/1/2016 \*:\*:\* , and 2) > 1/1/2016 \*:\*:\* , and 3) 1/01/2016 \*:\*:\* ... 3/01/2016 \*:\*:\*

- ALSO fix search so you get greater than too:

> 1/1/2016 search strategies < 1/1/2016

- Remove section from find using tags in Learn and Reference modules?
- Check if deletes in learn, test, and report modules also check for other section keys? All section key checks have been removed.
- Fix script findPrimaryRef so it no longer pays attention sections during finds as libraries now only have one section each (so there are no sections to find). SEE NEXT NOTE>>>
- >>>Fix import script and maybe import script so they clean up all section, ksection, and kcsection fields with the libraries ID# number. Eventually, remove these fields from all tables and scripts. I think the library name is keyed to a tagGroup record. There is no section table. REMOVED FROM SCRIPTS.
- Fix script addTagToMainRecord (update) so the message for adding in non-edit mode in the ref section reads better.
- Fix find button on reference tag menu copyright layout.
- Remove sectionID from find scripts.
- Fix reference new and duplicate scripts, which are no longer opening these new/ duplicate records in new windows. This means when you click 'back' you lose the Reference window and have to restart the library to get it back.
- Fix order button for stuff keyword tags. SOLUTION: Removed keyword option.
- Create real check marks ✓ and T's to help user identify which test items are check list items and which are boiler-plate-add-text items.

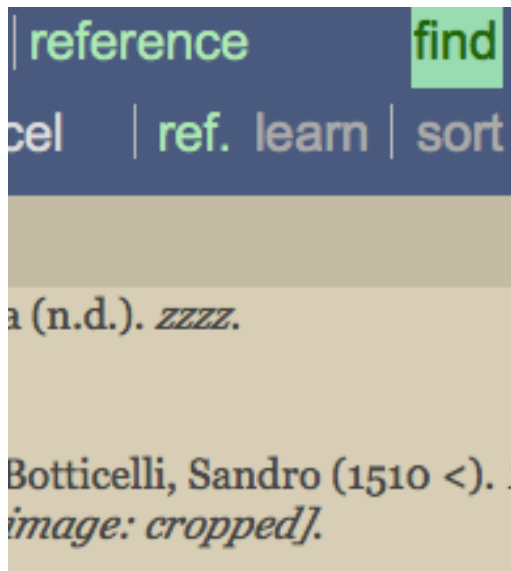

- Edit newest tag and group scripts so they create check mark ✓ for each new record.
- Create popup window for copyright tags, so only can edit in edit window and not tag list window (like you can do now, making things really slow).
- Lengthen copyright layout group name fields so it shows full title on iPhone.

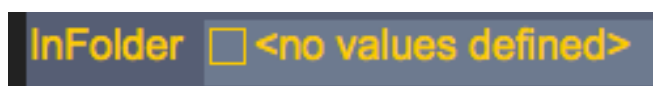

- change all web viewers
- For test items create test check button at template level using note field

- fix learn find mode so clicking on ref finds correct reference tags

- AND IN REFERENCE fix so clicking on find references button goes to find layout.
- Fix QV ref file selection script and conditional formatting of buttons to include HDD files.
- Fix addToTags picture button conditional formatting to include HDD ref files.
- Fix loss of folder location checkbox records.

- Create a script to be used at startup that deletes and then recreates all locked records = copyright and file location records, and copyright group records.
- Create links to all copyrights that come standard in the library.
- Figure out why just HDD media but no HDD box checked shows question mark in web viewer for bedroom woodside 008 in fp7 A: It was the web not HDD, and the final name was wrong, SO need to modify help to include address a question mark.
- Add back button to setup test-item layout that is hidden except when user is coming to these via the 'edit/new' button in the testing or reporting modules. Change

gotoSetupTest script to accomplish this change.

```
Woodside Sierra Inventory Library
Test-section Template

item  info                main ?
edit/new | checkortext | sort
```

```
1 Test-Section Template | main ?
2 a [redacted] 3 Test-Item
   [back]
newtest-item group x sort move link
```

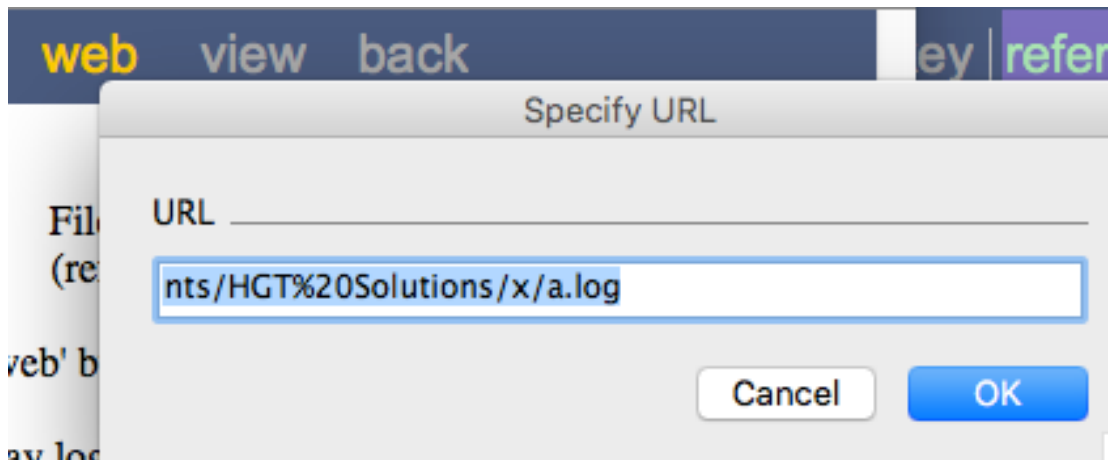

- Add find View script step and layout, so if user has elected to not show images for learn tags then also don't show them when user is finding using tag learn records. DO for both LEARN and REFERENCE layouts.

		100	200	300
	node	copyright	brainstorm	test
Header	key	reference	find	main ?
	cancel	ref. learn		
Su...	date			
Body	Caption			//IMPORTA NT: Referen ces to relate d tables are only allowe

### Script: toggleTagMenuWindowView

```
Else If [$$citationMatch = "ref" and Get (LayoutTableName) = "testLearn"]
  If [Left (Get (LayoutName) ; 1) = "|"]
    #
    #from 1 to 2
    If [Left ( TEMP::layoutLtagL ; 4 ) = "more"]
      Set Field [TEMP::layoutLtagL; "less" & Get (LayoutName)]
    #from 2 to 1
    Else
      Set Field [TEMP::layoutLtagL; "more" & Get (LayoutName)]
    End If
  End If
  #
End If
#
```

- Fix web buttons so they don't ask about url

- Fix help 28 so it no longer refers to markçholder.
- Improve language of help 29.
- Figure out why using "d" button in text edit mode hides record created until user clicks 'back' and then 'learn'. AND !!! Why it fails to tag the original as part of the set! IT WAS BECAUSE the new learn record script didn't retile the window to "Edit".
- For reference other checkboxes, check after user enters other text. AND If user unchecks a reference other box, ask if they want to delete the other contents and if so erase them and if not recheck the other box. DECIDED NO. Fixed reference calc instead so only is affected if box is checked.
- Notify user when they add other node tags in reference mode, which will not be seen on main layout because the text field nodes field is filled in.
