LIBRARY TEST
Done!

- TEST Change field name caption to note. Test catchFindLearnErrorMessagesTextFieldBUTTON and catchFindLearnErrorMessages

- TEST Fix deletion of last test result with checklist items, so when library returns to subsection menu, the Tag Menus window does not remain on the checklist layout.

- TEST Fix sort when creating new subsections so the group header always shows up.

- TEST Highlight info button if there are Learn records for a subsection.

- TEST If user has decided to hide FTs then make hiding them part of the test item menu script.

- TEST Find out why TEMP::testHideFormTextItemsFTs field is not showing anything but the test number? ANSWER: It was changed to number field. NEW QUESTION: Investigate if it has any impact on the script for which this change was made. ANSWER: TEMP::testHideFormTextItemsFTs = 1 is used in the Hide FT script. Need to create a separate field for this task.

- TEST Add item scripts for adding time info and for hiding form items, and for showing unhidden form items as FTs instead of Ts.

- TEST Create a way to show info/learn references in a separate window in both the test and report sections. Make this only available in the reference, not stuff, libraries.

🙂 TEST Fix problem with tag menu in learn module where after removing a learn record from a test tag, the learn record retains its order number for that tag and fails to sort out of the tag's learn records section.

🙂 TEST Comment scripts testInfoReferences (new), loadTestInfo (update), loadTestItemRecord (update name change loadTestRecord), gotoDefaultsOrReport (update) $$doNotOpenReferenceWindow , editLearn (update), editReport (update), menuTestItem (update), returnToSubsections (update and name change returnToStep3).

🙂 TEST Fix spell check so locked subsections immediately revert back to saved spelling upon exiting.

🙂 TEST Improve specificity of delete message for deleteTestResult so user knows if they are deleting a result from the current section or a different test section.

🙂 TEST Indicate which subsections are in which sections.

🙂 TEST Add ability to insert date and time with a button.

🙂 TEST Add ability to designate an item group as a form, and then insert all text items as form elements and remove the items from view, so only checklist items remain, and text items that are not part of the form.

🙂 TEST Decrease the width of number popup lists by creating two 20 point high lists behind each number displayed. It does not matter which the user clicks on, just that anywhere they click on the display order number pop opens a list.

- TEST Create new test result views and add a view button and script to toggle through them.

- TEST Fix test total in all sections so it sorts based on section ID instead of spelling. Also fix sort alpha by adding a field so sort is based on name of section instead of how many results there in it.

- TEST Fix Tgoto script for subsection layout so it focuses on this layout and not the section layout.

- TEST Ask user when deleting a test result with checklist items checked if they really want to delete it knowing checklist items have been checked.

- TEST Fix delete test result script so when a result is deleted in the middle of the list of results, after the delete the record shown is the next record and not the last record in the list.

- TEST Sort setup test sections group alphabetically

- TEST Fix so when going to edit info and then to edit test and returning NOT ALL items show up. A: Decided to prevent user from going to Test Template when in Test or Report mode.

- TEST Highlight info button when there is info on both test and report info Tag Menus layouts.

- TEST Fix back button on Test Tag Menu so only lights up when user is coming from a test module (same goes for button on setup test module).

- TEST Fix when going to test setup from learn section and returning the script goes incorrectly to the keyword instead of the test tag menu.

- TEST Stop user from even going to test module for a test subject node that is locked.

- TEST Fix process of creating headers so it is attached to a button instead of adding a character.

- TEST Test scripts that use the layout Discoveries (rename it to testSCRIPTloops) to insure they can be in list view, and the removal of the picture field does not effect anything.

- TEST Fix this confusing message "You need to create a subsection by clicking the 'new/edit' test button above, before you can create a section for your test. Sorry if this is confusing. As the test section screen (this screen) before you can see the test create screen." ANSWER: Deleted script and added function to newSectionFromTemplate. Updated message to read ""There are no test-section templates available for creating new test sections. To create some 1) click 'back', then 2) click 'section-templatesetup' and finally 3) click 'new' to create your first test-section template. 4) Customize it to meet your needs."

- TEST Fix conditional formatting on test tag menus layouts as it shows a dark rectangle.

- TEST Test newSubsectionGroup and other test scripts for focuses and focus variable renaming issues.

- TEST Fix relationship of pulldown test section field on test template setup.

- TEST Fix edit/new button script on test and report item layouts so it goes to the test item layout instead of the test section layout.

- TEST Fix test item lock template records as they are locked to the subsection and need to be locked to the node that create them.

- TEST Fix section record find so when going to the edit test section only section tags are displayed. Right now all tags are being displayed.
