LIBRARY LEARN
Done!

- LEARN Fix find learn record tag menu layouts so user cannot edit them in find mode.

- LEARN Fix color of purple highlight text so it is less bright and easier on the eyes.

- LEARN Fix file and web button message to remove new/edit step and instead tell user to just click the QV button, unless they are on that layout, then tell them where to go.

- LEARN Add message to share script to let users know they may see only 2 out of 12 linked records but will see all once pasted.

- LEARN Fix internal references script so it can be used without going to references first.

- LEARN Fix shareLearnRecords script so main point numbers increase properly. Right now, the first main point is 1.1 and the second is also 1.1. It should be 1.2.

- LEARN Create space in shareLearnRecords script between keyword and references if both are present.

- LEARN Fix selectRefMediaForLearnRecord by adding a commit command at the end so FileMaker knows the user is committed to changes made by this script, and will figure these changes into other calculations.

- LEARN TEST file/folder button for MAIN folder on Learn Layout selected as media tag.

- LEARN TEST file/folder button for MAIN folder on Learn Layout selected as first reference tag.

- LEARN TEST file/folder button for MAIN folder on Test/Report Layout selected as media tag.

- LEARN TEST file/folder button for MAIN folder on Test/Report Layout selected as first reference tag.

————————————————————

- LEARN Fix showFileInLearnRefandCopyrightWindows so just the file button offers to open files in Filemaker. AND fix web button also offering to open website when there is no url. ALSO insure copyright part of script opens the URL and not the title field. AND Fix conditional formatting and entry into link fields so it is more obvious that a link is available, and to allow user to see full reference when clicking into the displayed reference.

- LEARN Fix view button when brainstorm is selected so sort remains the same.

- LEARN Fix copyright button so it opens correct copyright in view window.

- LEARN Fix TgotoCitationMenu so if the menu is not selected it is, and the selected tag if any is selected.

- LEARN Fix showFolder script so it also opens folders for first reference and not just for references whose media is used by the learn record.

- LEARN Consolidate open folder and file scripts and eliminate folder button (don't forget picture windows).

● LEARN Test tag find layout for list view.

● LEARN Fix edit window scripts (there are two of them!). ANSWER! There are two of them because one is for QV layouts and other is for the text edit layouts. Changed name of QV edit script.

● LEARN Fix close window scripts for edit windows as there are 2 of them! closeWindow (update) works fine but finishTestLearnEdit fails to close the Edit window. ANSWER! One of them is for the QV window and was assigned incorrectly to the learn text edit locked layout.
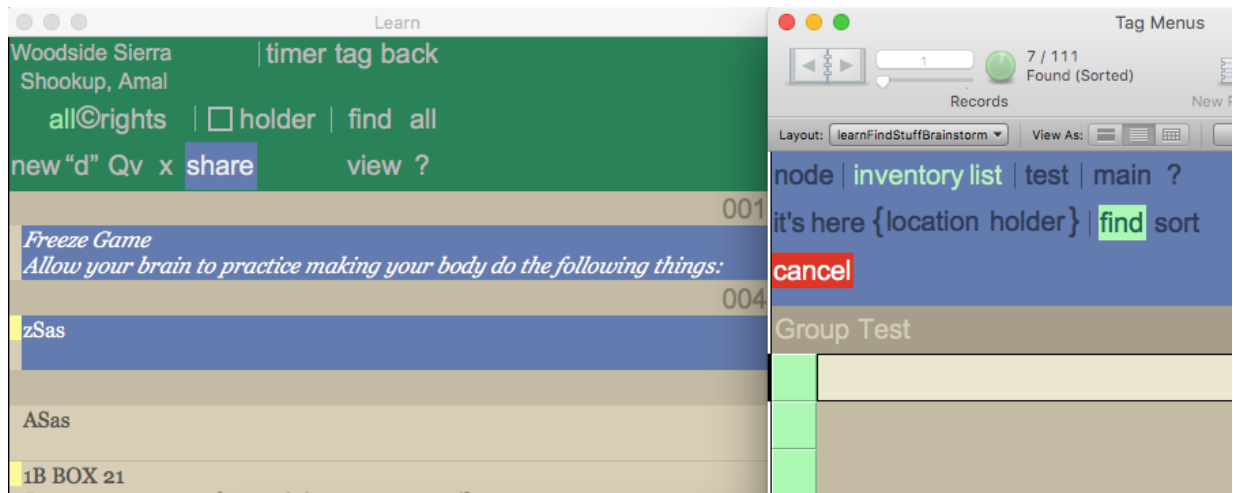

● LEARN Make inventory order list a popup.

🟡 LEARN Add copyright to shareLearnRecords script and update formatting where it is showing to follow the "Author (date). Copyright ____." format.

🟡 LEARN Fix when first going to Learn module clicking on the share button delivers a blank record, but when click into a different record and then back to the first record the share works.

🟡 LEARN Update reference concatenated fields to insure the are using updated reference concatenated field.

🟡 LEARN Update reference short field with changes made to reference for reference window field.

🟡 LEARN Fix find Learn record tagged with learn records. Failing to have valid search and failure to turn color to indicate when records are found.

🟡 LEARN Fix location and holder tag message logic.

🟡 LEARN BRAINSTORM Fix inventory list conditional formatting so it is full screen not half and half.

🟡 LEARN BRAINSTORM Test insureEqualityOfSpellFields changes for brainstorm group names.

🟡 LEARN BRAINSTORM Fix view copyright button on Brainstorm Tag Menu layouts. Problem extends to Setup where when clicking on back and then add, back again fails, and instead goes to an add screen for adding key and node tags, and then
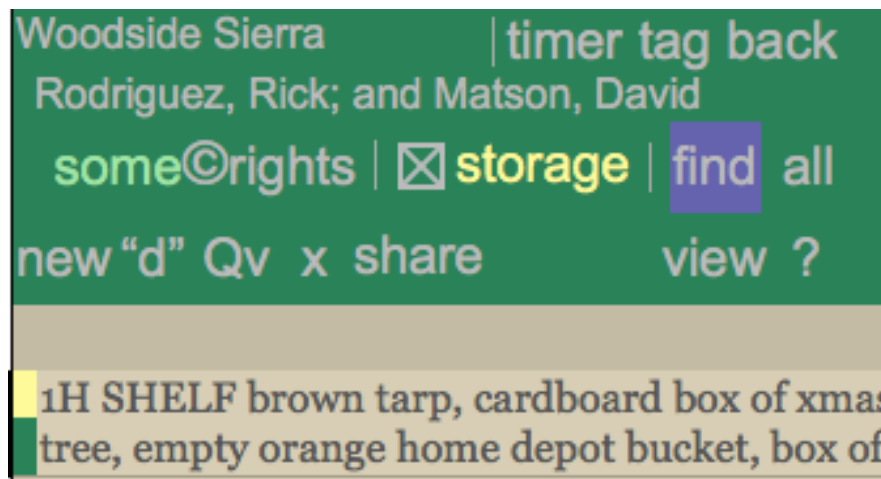

back again sends user to learn screen when user was on setup. ANSWER: The layout return variable was being erased, and on the brainstorm layout the wrong lock variable was being referenced.

LEARN BRAINSTORM Fix find learn records find mode script so it deselects brainstorm and test conditional formatting when user has not selected any brainstorm or test tags in find mode.

LEARN When returning to setup from Learn, there is a lot of flashing before the picture loads in the Tag Menus window. What is causing this? This seems to be fixed.

LEARN Fix find button so it does not turn purple when there are no linked records.

LEARN Remove indent button so user can no longer call up the text formatting bar, and thus it no longer has to be closed by a script step.
