LIBRARY OTHER

- ⊙ START Add warning to file menu if main library file is on the desktop.

- ◯ SCRIPTS Check to make sure all scripts are accounted for in the HGT github folder.

- ◯ WEBSITE Create GitHub website for HGT Project and get rid of HelpGiveThanks.org and .com urls.

- ⊙ REFERENCE check IF website media picture is checked AND user then deletes url, that when user hits the back button they get heads up that the web button will fail.

- ⊙ START Test page setup change in startDatabase (update) script

- ⊙ TAG MENUS on double and triple button layouts color the buttons, and fix the TS button coloring on some of the default node layouts where it is not colored.

- ⊙ REFERENCE PATH Fix help message when user fails to enter a valid file path so it tells them how to locate it on a mac and on windows PC.

- ◯ TEST file and folder open script on MS Windows 7: file:////Users/davidmatson/Documents/HGT Solutions/

- ⊙ RE-TEST the order selection button for groups and records on tag menu reference layouts and main reference layouts.

- ◯ TAG BUTTON Fix tag button so it runs a script that repositions windows to overcome problem with hiding tag window in FM13. Need to not reposition unless on a Mac and the windows are the same size and right on top of each other.

- ⊙ LEARN WEBSITE Is this table in use?   YES! It has been repurposed as the library setup creator reference table.

Table:	learnWebsite	5 fields
Field Name		**Type**
⬍ _LlearnWebsite		Number
⬍ _Number		Number
⬍ ktestlearn		Number
⬍ URL		Text
⬍ URLPubDate		Timestamp

- ⊙ ADD MENU Figure out why there are 2 addMenu1 layouts? The addMenu1 first layout is for adding to copyright tags. I changed the name of the second addMenu1 layout to addMenu2. Search DDR to find out if it is in use? It is not in use, but I still

want to do more testing before deleting.

○ HEART Be sure to update start (update) from the Heart Whisper.

○ WEB VIEWER Clarify language in web viewer.md files.

◉ FIX missing field issue in checkForLibraryCreatorNode. ANSWER: It as only missing in a copy of this script that is no longer in use. Deleted it.

◉ FIX Table view on interface layouts to insure they go to the view — list, table, form — that is essential to show that layout's information.

◉ FIX Get rid of missing field and missing table errors.
